MERN Stack Developer with 6 months of professional experience in frontend development and hands-on experience building full-stack web applications using React.js, Node.js, Express.js, and MongoDB. Experienced in REST API integration, authentication workflows, responsive UI development, and application deployment. Interested in building scalable, maintainable applications and leveraging AI-assisted development tools to improve development workflows.

TECHNICAL SKILLS

- **Frontend:** React.js, JavaScript, HTML5, CSS3, Responsive Web Design
- **Backend**: Node.js, Express.js, REST API Development
- **Database:** MongoDB
- **CMS: TYPO3 CMS**

PROFESSIONAL EXPERIENCE

Junior Frontend Developer | NITSAN Technologies | 6 Months | Feb2026 – Aug2026

- Built and enhanced responsive user interfaces using JavaScript, HTML5, and CSS3.
- Converted design requirements into clean, reusable frontend components and page layouts.
- Used TYPO3 CMS to update website content, templates, and layouts.
- Fixed UI issues and improved responsiveness across desktop, tablet, and mobile devices.
- Collaborated with developers and team members to complete assigned tasks on time.

PROJECTS

1| MERN Real-Time Chat Application | MongoDB, Express.js, React.js

- **GitHub** | **Live link :** https://sanjayyy04.github.io/ChatApp-MERN-complate/login
- **ChatMe** is a production-oriented messaging app with friend requests, 1:1 and group threads, media attachments, presence, and typing indicators. The client is a responsive PWA (React/Vite) with a mobile-first shell; the backend uses Node/Express, MongoDB, JWT sessions, and Socket.IO for live updates. Security and reliability features include IP-based auth rate limits, optional offline email digests, VAPID web push when users are away, ECDH + AES-GCM E2EE for DM text and attachments, and sent/delivered/read receipts for direct and group chats.
- **Tech stack** : React – Vite - Socket.IO - Node.js – Express – MongoDB – JWT - Web Push – PWA - Web Crypto API

2 | AI Website Analyzer

- **Link | GitHub**
- Built an AI-powered website analyzer using **React, Node.js, Express, Lighthouse, and Cheerio**. Developed URL-based audits for performance, accessibility, SEO, best practices, and HTML content signals. Integrated Google Gemini to generate developer-friendly summaries, fix suggestions, and code examples, with a rule-based fallback. Created interactive audit charts, downloadable reports, and a responsive light/dark theme interface.

3 | My Tasks - React Task Manager

- **GitHub | Live link :** https://sanjayyy04.github.io/todo-react-app/
- Built a responsive task-management application using **React 19, JavaScript, and Vite**. Implemented task creation, completion tracking, inline title editing, due dates, tags, filters, separate active and completed task views, undo actions, and keyboard shortcuts. Used localStorage to save tasks in the user's browser and added linting, unit tests, production builds, and GitHub Actions deployment to GitHub Pages.

4 | GenZ AI — Gemini AI Clone | React.js, AI, Docker, Jenkins, GitHub Actions, AWS EC2, Nginx

Built a responsive AI-powered web application inspired by Gemini, with a focus on modern React development and automated deployment. Implemented **CI/CD pipelines using GitHub Actions and Jenkins**, containerized the application with Docker, and deployed it using **AWS EC2 and Nginx**.

EDUCATION

B.E. Computer Engineering — Gyanmanjari Institute of Technology 2023-2026

Diploma, Computer Engineering — Gyanmanjari Institute of Technology 2020-2023
